

Hello, I am

Jang Byeong Heon

An AI service builder who has shipped LLM, recommendation, and vector-search features as real user experiences.

With structured thinking from a Philosophy degree and 1,725 hours of AI/SW training at SSAFY, I complete the full cycle from problem framing (planning) to React implementation.

01

Led DailyLog as PM and won the SSAFY Specialized Project Excellence Award (3rd place)

02

Designed one reflection flow combining voice input (SenseVoice), recommendations (Thompson Sampling), and vector search (pgvector)

03

Implemented Loggy's real-time WebSocket review screens in React myself

01. Identity & Product Philosophy

My background in Philosophy trained me to analyze the conditions of human judgment, choice, and trust. This allows me to look past surface-

level requirements to understand 'why' users behave a certain way. I have evolved into a PM who interprets problems deeply and realizes those interpretations as functioning systems.

Through SSAFY, I expanded my technical literacy in Python, algorithms, and AI, connecting them to user context. I believe technical depth is leverage that reduces product risk and lowers communication costs across teams during the planning phase.

"I treat AI as a layer for better decisions, not as a gimmick." I see AI not as a simple automation tool, but as a support layer that helps users think and decide more clearly. In the DailyLog project, I solved the 'blank screen' problem with an AI-driven questioning flow, turning technical elements into real service value.

Core Competencies

- Platform-Oriented Design
- Decision Architecture
- Technical Communication
- AI as Decision Support

02. Core Projects

Experiences in solving various problems—user friction, fragmented decisions, and energy mismatches—through structured service design.

SUBMISSION FOCUS

Core 3 Projects

DailyLog, Loggy, and Promtree are prioritized to show problem framing, role, technical choices, and solution process as interview-ready cases.

SSAFY specialized project

DailyLog | AI-Driven Reflection & Decision Support

A service that solves user retention issues by defining the problem as 'input friction' and 'broken reflection flows', using AI-driven questioning.

PROBLEM DEFINITION

Traditional journaling presents a daunting blank screen, leading to high psychological friction and failing to turn records into actual behavior change.

ROLE

PM & Frontend | Problem framing, user journey design, prioritization, UI implementation, and presentation

KEY CONTRIBUTION

- Reframed recording failure as 'psychological friction' and 'lack of structure'.
- Increased input convenience by structuring day into 7 slots (Event, Emotion, Cause, etc.).
- Connected reflection to action by recommending 'one immediate task for tomorrow'.

TECH STACK

AI reflection

Recommendation

Product planning

PM

RESULT / LEARNING

Solved behavioral problems through technical structures (AI flows).

SSAFY 14th autonomous project final presentation

Promptree | Marketplace for Executable AI Know-how

A marketplace that packages expert AI know-how as executable workflow products users can run immediately.

PROBLEM DEFINITION

AI tools became easier to access, but stable outcomes still require strong prompts, task flows, and refinement know-how. That expertise is scattered across channels, while existing prompt markets expose raw prompts and remain limited to simple generation.

ROLE

AI model integration support, marketing, business/service planning support, presentation and market/competitor analysis contribution, Q&A preparation

KEY CONTRIBUTION

- Defined the service direction of converting AI know-how into executable workflow products.
- Balanced creator protection and user convenience through hidden prompts, slot-based execution, and generated outputs.
- Reviewed revenue structures around template commission and execution-based credits.

TECH STACK

Next.js

FastAPI

AI Marketplace

Prompt Engineering

GA4

Fabric.js

RESULT / LEARNING

A planning case that considered problem framing, market viability, creator protection, and revenue models together

SSAFY project

Loggy | Decision Recording & Collaboration Platform

A platform that maximizes collaboration efficiency by formalizing scattered discussions into Discussion, Approval, and Record structures.

PROBLEM DEFINITION

Decisions from meetings and messengers were often lost, leading to repetitive discussions and wasted organizational energy.

ROLE

Planning & Frontend Lead | Service planning, decision flow structuring, and frontend lead

KEY CONTRIBUTION

- Successfully ported GitHub's PR/Merge concepts into collaboration UX to structure decision processes.
- Separated data lifecycles between transient chat and permanent commits to increase info density.
- Planned and introduced a Git Graph-based Tree View UI to visualize discussion flows.

TECH STACK

Collaboration platform

GitHub workflow

Real-time

PM

RESULT / LEARNING

Proven ability to translate complex collaboration issues into clear system structures (Git Metaphor).

SUPPORTING / HACKATHON

Supporting Projects & Hackathons

Additional projects are separated as archive cases that show domain expansion, rapid execution, and supporting ideas.

COMPLETED

May 16, 2026

AI / Hackathon / Prototype

GenWing Live | AI-Driven Event Networking App

An AI networking web app prototype built using Genspark OpenClaw at the Genspark Meetup & Hackathon.

Genspark OpenClaw

AI Agent

Prototype

PWA

ROLE

Solo planning & development | Problem framing, UX design, agent workflow, and deployment

COMPLETED

Feb 2026

Jeju AWS Global Space Challenge hackathon

Tamna-AI | Distributed Data Center Location Analysis

A service that reframes Jeju's energy curtailment as a grid mismatch issue and analyzes optimal locations for data centers to absorb surplus power.

Energy domain

Location analysis

Business planning

PM

ROLE

Planning | Problem reframing, business model design, and service structuring

COMPLETED

Dec 2025

SSAFY integrated project

S.A.L.E.S | Customer-Centered CRM Project

A CRM project that structured fragmented lead management into a '5-stage customer journey' and 'Kanban-style pipeline'.

CRM

Customer Journey

Business Planning

PM

ROLE

Planning | Defining 5-stage journey, pipeline UI design, mapping business logic to data models

COMPLETED

Sep 2025

Jeonju ICT Coding Challenge

Jeonju ICT Coding Challenge | Regional Issue-Solving Service

A project defining regional tourism, social, and environmental issues and materializing them into actionable service features and implementation.

Regional issues

Public service

Planning & Implementation

ROLE

Problem framing, service planning, and implementation support

COMPLETED

Aug 2025

Shinhan Bank X SSAFY hackathon

Campus Chronicle | Growth Data-Driven Financial Service

A platform where students link learning and activity data to financial value, proving trust based on their growth process.

Fintech

Growth data

Product planning

Financial UX

ROLE

Planning & Frontend | Problem framing, core flow design, and frontend implementation

03. AI in Action

Real cases where AI was used as a problem-solving tool, not decoration. Each case follows problem → how AI was used → outcome.

DailyLog

A reflection flow where AI asks first

PROBLEM

Users gave up journaling because they faced a blank screen with no idea what to write.

HOW I USED AI

Structured each day into Event · Emotion · Cause slots and designed a prompt flow where AI asks context-aware questions first.

OUTCOME

Became the core feature that lowered the barrier to reflection, leading to the SSAFY Specialized Project Excellence Award (3rd place).

DailyLog

Turning records into action recommendations

PROBLEM

Accumulated records ended up as read-only data and never drove behavior change.

HOW I USED AI

Balanced exploration and exploitation with Thompson Sampling, and used pgvector search to bring past reflections into the current context.

OUTCOME

Built and shipped an AI data flow that connects recording → understanding → recommendation.

Promptree

Making prompts a sellable product

PROBLEM

AI know-how (prompts) loses its value the moment it is copy-pasted, so no market could form.

HOW I USED AI

Structured prompts into slot-based executable templates and improved the execution flow based on GA4 drop-off data.

OUTCOME

Extended the idea into an 'AI know-how market' business model with market and competitor analysis.

AI agents as execution partners

PROBLEM

A hackathon deadline demanded a working product, not just an idea.

HOW I USED AI

Fed structured UX designs and requirements to the Genspark OpenClaw agent, completing a solo planning-to-development cycle.

OUTCOME

Shipped an AI networking PWA prototype within the event.

04. Core Competencies

A project-backed view of the planning, AI/Data, web collaboration, and communication skills used across the Core 3 projects.

01

Product & Planning

How I reframed problems and translated them into service structures in DailyLog, Loggy, and Promtree.

Problem Framing

Reframed journaling failure, lost collaboration context, and AI know-how exchange as user behavior and service-structure problems.

User Flow

Designed question flows, commit flows, and slot-based execution flows so users could move from uncertainty to the next action.

PRD / Policy and Service Structure

Organized key features, information structure, roles, and priorities into documents and screen flows so teams could implement against shared criteria.

Market / Competitor Analysis

In Promtree, reviewed AI know-how commercialization, revenue models, and competitor positioning to test business viability.

AI & Data

I connect AI to service layers that support user judgment and action, rather than treating it as decoration.

LLM / Prompt Engineering

Handled prompts as design elements that shape experience and output quality, as in DailyLog's question flow and Promtree's slot execution.

Python / SQL

Through SSAFY training in Python, SQL, AI, and Data, I consider data and implementation constraints during planning.

Data-Informed Decisions

Reviewed how user behavior data can inform product decisions through recommendation, retention, and collaboration-record structures.

AI Feature Planning

Designed AI features to support reflection, recording, and execution while preserving user control instead of replacing user judgment.

Web & Collaboration

Execution skills for turning planning intent into screens, data flow, and team workflows.

React Implementation Literacy

Participated in frontend implementation and checked how screen flow and state changes affect user experience.

Git / GitHub

In Loggy, interpreted Git's PR/Merge structure as a collaboration decision UX and adapted it into a service model.

Notion / Jira / Slack / Mattermost

Used collaboration tools to organize schedules, roles, meeting notes, and presentation materials around shared execution criteria.

Collaborative Documentation

Documented feature definitions and decision rationale so teammates could implement and present from the same context.

Communication & Leadership

Communication skills built from philosophical reasoning and SSAFY team-project practice.

Presentation

Focus on explaining project problems, solution structures, and lessons learned in a way interviewers and users can understand.

Team Alignment

Helped synthesize team ideas into one goal and narrow them into implementable priorities.

User-Centered Explanation

Use question framing and logical explanation from Philosophy training to explain why users drop off and what they need.

Feedback Loop

Adjusted project direction by reflecting feedback from presentations, meetings, and implementation into screen flows and documentation.

05. Selected Experience

AI/SW Training & Product Projects

Samsung SW·AI Academy For Youth, SSAFY

2025.07 - 2026.06

- Learning service development and AI/SW technical literacy based on Python, SQL, Web, AI, and Data.
- Worked on problem framing, feature prioritization, screen-flow organization, and presentation materials in team projects including DailyLog, Loggy, and Promtree.
- Helped share notices and support communication among trainees as the class representative (CA) at the Gwangju campus.

Core Project Practice

DailyLog / Loggy / Promtree

2026.01 - 2026.05

- In DailyLog, reframed journaling failure as input friction and reflection-flow problems, then connected it to AI questioning and recommendation structures.
- In Loggy, organized disappearing collaboration context into a recording flow inspired by Git's PR/Merge structure.
- In Promtree, structured AI know-how as an executable workflow product while reviewing market viability, revenue models, and competitor positioning.

B.A. in Philosophy

Chonnam National University

2016.03 - 2022.02

- Studied philosophy and trained by reading texts, organizing questions, and explaining ideas logically.
- Later connected SW·AI learning and service planning experience into an interest in problems between people and technology.

Early Global & Leadership Experience

Portage High School / Gwangju Goryeo High School

2012.01 - 2016.02

- Lived for one year as an exchange student at Portage High School in Indiana.
- Served as student council president in high school, gaining experience speaking in front of others and coordinating opinions.

Military Service

Republic of Korea Marine Corps

2016.12 - 2018.09

- Served as a rifleman in the 2nd Marine Division.
- Partly supported interpretation and situation updates during ROK-US joint exercises.
Learned the habit of carrying assigned work through in constrained environments.

Customer Experience Operation

Charancha / Jaguar Land Rover Gangdong Service Center

2022.12 - 2024.01

- Handled valet operations and customer service at Jaguar Land Rover Gangdong Service Center.
- Managed vehicle movement, customer waiting, and on-site communication while experiencing the flow of a service operation.
Observed firsthand where customers tend to feel friction in the service process.

Sales & Field Operation

Yeyoung Design

2022.08 - 2022.11

- Handled interior film sales and customer consultation.
- Supported on-site installation work and experienced the gap between customer requests and actual field conditions.
Learned how requirements explained in conversation can change when they meet the real work environment.

Let's Shape the Future Together

I am open to conversations about AI/SW service planning, PM roles, portfolios, and project collaboration.

[VISIT GITHUB](#) [LINKEDIN](#) [SEND EMAIL](#) [VIEW PORTFOLIO PDF](#)

Built with React and an AI/SW-focused portfolio structure.
Designed to present problem framing, service planning, and AI-enabled project experience.
